

KIT 1102

Another VU-METER from SMART KIT but this may be the most advanced and the best looking of all. It has been designed for STEREO amplifiers and uses 15 LEDs, placed in a straight line, 7 for each channel with the LED in the centre used as an ON indicator. The display is symmetrical, on either side of the central LED which is always on. It works with any amplifier from a few mW to 100 Watts. As it works with 12VDC it can also be used in the car.
