

ViPRO HC5 HDD CADY

HC5 is the removable HDD Cady for ViPRO MVR 500 series which allows direct download of video files. HC5 hard disk cady adopts the military connector that supports maximum 5000 times of "PUSH AND PULL" and the coppered pins can connect the Mobile DVR device strongly to avoid loose after long time usage and MVR vibration working condition.

The special screw (or "captive screw") can keep the hard disk from slipping when the customer reverses the MVR and unlocks the hard disk cady. Many customers often forget that the hard disk is not locked and if he reverses the MVR, the hard disk cady will fall and will be damaged without the protection of captive screw.

Key Features

- The removable hard disk cady USB port to download the video files easily
- Military standard connector can support 5000 times of "Push and Pull"

Technical Specifications

Product series	HC5 HDD Cady
Connector	The military standard coopered connector
